Innovative Care in Pediatric Feeding and Swallowing: Bringing it All Together

October 9th – 11th, 2015

Presented by
The Feeding & Swallowing Program
Department of Otolaryngology and Communication Enhancement
This comprehensive 3-day conference is designed for speech-language pathologists and feeding therapists who care for pediatric patients with feeding and swallowing disorders. The conference will highlight the benefits of multidisciplinary collaborative assessment and management of feeding and swallowing disorders. The course will emphasize evidence-based research and innovations in clinical care in pediatric dysphagia.

As a result of this course, participants will be able to:

- List 4 potential effects of gastrointestinal, neurological, cardiac, and surgical issues on feeding and swallowing development.
- Identify the impact of aerodigestive and airway anomalies on feeding and swallowing outcomes.
- Explain three therapeutic feeding and swallowing interventions to apply to the preterm infant population.
- Define the difference between operant conditioning and sensory desensitization feeding therapy approaches.
- Summarize the benefits of multidisciplinary assessment and management of feeding issues.

Accreditation

This program is offered for 2.0 CEUs (Intermediate Level, Professional Area).

Special Needs & Accommodations

If you have any special needs or disabilities, please contact us in writing at least 2 weeks prior to the conference to ensure that your needs are met. Please visit our website for additional information regarding directions, parking, and accommodations:
